## PROJECTS

Junkman( Hackathon developed project)

- We pitched that junkman will be a service providing startup where people can easily book a cleanup in the places near their household like roads, parks and can also sell their household junk in exchange of money.

Lakshyshri.org

- Currently working on a ngo's website showcasing their deeds and all the work they'll be doing in future.

Third year minor project (OLD STRINGS)  
(02/2020 – Present)

- This project basically revolves around creating a user friendly e-commerce market place for people interested in buying, selling or mortgaging their old or currently using musical instruments and gear used in holding music shows and gigs. Also includes a ML model to reccommend instruments based on input sound.

To do list

- Worked on google apps script and sheets and made a to do list for the employees of the company i interned in.

Business Automation ( Using Google apps script)

- Internship Project 2 - Using google forms and sheets we wrote small scripts to automate the info about regecton/selection of the stipend they were providing to their employees for extra curricular or curricular courses

MyCrop and BigDrip ( Hackathon Developed Project)  
(02/2020 – Present)

- Stood 4th among 100 teams came from all over from india. Built an IOT device for soil nutrition monitoring and provides nutrition through drip irrigation system in the absence of the user also it revolves around an app for buying and selling of your homegrown vegetables.
